**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, 14-20, 29, 37-46, 47-48, drawn to network configuration learning technique, classified in class 370, subclass 255.
- II. Claims 10-13, 21-24, 25-28, 36, drawn to routing table, detail in a router, classified in class 370, subclass 401.

III. Claims 30-33, 34-35, drawn to addressing, classified in class 709, subclass 245.

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination (group II) specifies that the routing table has specific properties of a "mapping table maintained by each router, the table including location and communication information corresponding to each point on the network". The subcombination has separate utility such as a routing table in a firewall or router and does not need the specific "method for automatically processing subnet conflicts in a network defined by plural routers" of group I.

3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination (group III) is directed to "addressing the message from the first host to the second host using a first locally defined address of the second host" set forth in the combination and not required in the combination to be patentable. The subcombination has separate utility such as in network address translation for firewalls and other applications that do not need the specific "method for automatically processing subnet conflicts in a network defined by plural routers" of group I.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. A telephone call was made to Gregory A. Stobbs on 11/04/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
